

The screenshot shows the Microsoft Visual Studio interface during a debugging session. The main window displays the source code for '과제.cpp'. The code initializes an array of points and attempts to get the handle of the current module. It then prints the coordinates of each point. The output window shows the following results:

```
1번째 좌표 : 10, 50
2번째 좌표 : 20, 40
3번째 좌표 : 30, 30
4번째 좌표 : 40, 20
5번째 좌표 : 50, 10
```

The status bar at the bottom indicates the build log: '1221 %' and '빌드에 성공했습니다.' (Build succeeded).
